Hi Lizzie and Mira,

I hope you've both enjoyed the week and are looking forward to the long weekend ahead!  
Here's this weeks recap:

I've finished monitoring veraison at all the southern sites, and it is quickly finishing up at Quails Gate. I am set to return there on Monday, and I am expecting I will be finished monitoring most of the blocks. I'll keep you posted on how it goes. I also noticed a line missing in the data today for Quails Gate Block 6-1 Plant ID# 676. I'm wondering if I may have deleted the line by accident, as sometimes navigating the spreadsheet on the tablet is finicky. How would you like me to proceed with this? I'm sorry for the missing data point!

I also keep forgetting to ask Judy what base temp they use for the GDD models, but I just sent her a message and will let you know when she gets back to me. Nelson at Nk'mip says their Tbase is 10.

Lizzie, as we discussed the other day, I did take the job at the winery! I will be working there on Fridays, Saturdays and Sundays starting next weekend (Sept 11). Thanks again for allowing the flexibility for me to pick up some extra work! In addition, I have a dentist appointment booked next week on Tuesday, so I won't be available to go into the field that day. So for next week, my open days for a possible brix sampling will be Wednesday and Thursday (as I am monitoring QGE Monday).

I checked in with Scott from McIntyre about their plans for harvest, and he said they are planning for next week, but nothing is set in stone yet. Since he is involved in scheduling the pick orders, he had me send him a full list of our vineyards and blocks with Arterra so that they are on his alert list. He ensured me this will keep us in the loop when harvest plans are made down south. Yay!

I've also labeled all the bags for the next brix sampling, but noticed there were only enough labels for one set of bags for each site. I understand we're not thinking that far ahead yet, but I've never made labels on the computer before without using a special program, and was wondering how you guys printed them? That way I can have them set up on my computer in case I need to make more for additional brix sampling dates.

I hope you both enjoy the long weekend! Hard to believe the summer is coming to a close!

Warm Regards,  
**April**

Hi Mira and Lizzie,

Something else I just realized as I'm updating the data sheet, I must have forgot to monitor rows 9 and 10 for Mannhardt block 9-1 this morning. I'm really sorry. I'll make sure to get them when I go back on Monday.

Cheers,  
April

Hi April (and Mira),

Congrats on the new job! I am glad it worked out.

As for the missing row of data, you should be able to roll back to older versions in Google docs (when online) and see if you deleted it. That would be my suggested first line of attack.

Labels! Yes -- we need to get you more. \*Mira, can you get another set printed and shipped?\* You could toss them in a Fedex envelope and ship from Staples on campus (value=\$0). I guess send two more to be safe, though we may only need one. Feel free to pass this task to Faith or Geoff if you're overloaded on other brix stuff.

April, a request! Can you send a photo of yourself and short blurb for our site (<http://temporalecology.org/people/> and we're working on a wine focused one)? We'd like to mention your help, if you don't mind. Though totally fine if you don't want to be mentioned too.

All the best,  
Lizzie
