Hi Lizzie and Mira,

I heard from Scott today that blocks J (Chard) and E (Sauv bl.) are early harvest for them and they may start picking fruit soon. He said maybe sometime next week (7-10 days). I understand that you probably don't have the brix data yet, but I was wondering if I should start prepping things to do another sampling early next week? If you would like, I can also contact Mike and Nelson to see if they have any early harvests planned.

Also, I decided I will monitor at Nk'mip tomorrow as there seems to be enough clusters not at 95% for it to be worth it. Then that way we will be sure we have the complete data for all plants there. I'll then return to Quails Gate on Wednesday. Hopefully the longer periods of time between visits due to the Brix sampling, as well as my weekend away doesn't have a negative impact on the data.

Warm Regards,
April

Hi April,

I checked the data and understand it now (I had thought one date would be in only one column) -- and I agree -- it would be good to do one more veraison sampling at Nk'mip. Thank you!

And, harvest! Having never worked in a commercial vineyard I didn't even think of this. Let me check weather, think and get back to you on McIntyre. In the meanwhile it would be great if you could ask Nelson and Mike about harvest plans (and how they measure GDD if you can).

Thanks again!
Lizzie

Hi Lizzie,

Awesome, glad it all makes sense! I've organized my visit with Nelson so I'm all good to go tomorrow.

I'll get in touch with Mike and Nelson and see if they know dates for harvest yet. And my bad! I didn't realize you wanted GDD from all the managers, I'll be sure to add that in too.

Cheers,
April

Hi Lizzie and Mira,

Nelson said they have no harvest plans yet at Nk'mip, and Mike says harvest on the mature vines is still a while off, though the younger blocks will be harvested within the next 2 weeks. So sounds like we've got lots of time at those sites. Also, Tbase at Dark Horse is 10.3!

Warm Regards,
April
