Hi April,

I finally had a chance to look at your veraison data. It didn't look to me like changing the protocol too much was needed (that is, I did not see much evidence of plants hanging at 75% or such), but I would add, that you do NOT need to return to a vineyard if it's only to check on 5% or fewer of the clusters (i.e., 5% of the total clusters in that vineyard) that were at 95% or above. This might be pretty rare but would save you from returning somewhere just to check out 5 clusters out of a hundred plants.

All the best,

Lizzie

Hi Lizzie,

Thanks for your email!

Sounds good, I'll just keep monitoring as usual. I'm heading to Dark Horse and McIntyre tomorrow and am expecting veraison to be near finished.

Just to confirm, you had mentioned while at Nk'mip that I did not need to continue monitoring phenology there?

Warm Regards,
April
